2016 FDA APPROVALS OPHTHALMIC DEVICES

TRIGGERFISH | SENSIMED

A one-time use contact lens that detects tiny changes or fluctuations in an eye's volume and may help practitioners identify the best time of day to measure a patient's IOP

planning and evaluation of anterior segment pathology

INSIGHT 100 | ARCSCAN

Indicated for refractive surgical

ANGIOVUE IMAGING SYSTEM | OPTOVUE

Provides a noninvasive way to visualize abnormal blood vessels in the retina to help physicians determine an appropriate course of treatment

KXL SYSTEM | AVEDRO

FDA approves corneal collagen cross-linking platform, the KXL System, along with two photoenhancers - Photrexa Viscous and Photrexa indicatied for the treatment of progressive keratoconus

RAINDROP NEAR VISION INLAY

REVISION OPTICS

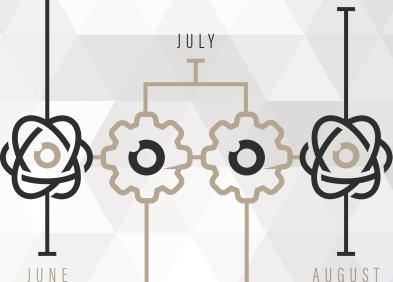

APRII

Implantable corneal device indicated to improve near vision by reshaping the anterior curvature of the cornea in presbyopic patients who have emmetropic refractions (+1.00 D to -0.50 D)

3D OCT-1 MAESTRO TOPCON

MEDICAL SYSTEMS

Combines a high-resolution color nonmydriatic retinal camera with the latest spectral domain OCT technology

TECNIS SYMFONY | ABBOTT

Extended depth-of-focus IOL indicated for primary implantation for the visual correction of aphakia in adult patients with less than 1 diopter of preexisting corneal astigmatism in whom a cataractous lens has been removed

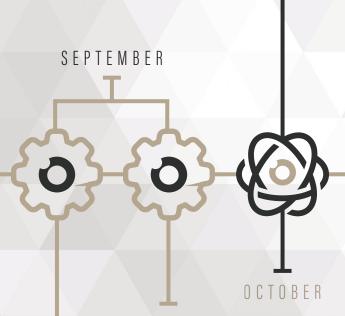

CYPASS MICRO-STENT | ALCON

Minimally invasive glaucoma surgical device approved for use in combination with cataract surgery. The device helps to reduce IOP in adult patients with mild-to-moderate primary open-angle glaucoma

MP-3 MICROPERIMETER

NIDEK

Measures local retinal sensitivity for functional assessment of the retina, and results can be displayed over a color fundus image, correlating retinal anatomy to retinal function

GYC-500/GYC- 500 VIXI GREEN SCAN LASER PHOTOCOAGULATOR | NIDEK

A solid state green laser that achieves stable treatment outcomes for multiple applications including retinal photocoagulation, trabeculoplasty, and iridotomy

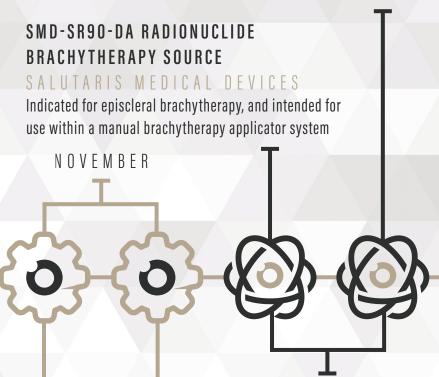

SMALL INCISION LENTICULE EXTRACTION (SMILE)

CARL ZEISS MEDITEC

A minimally-invasive corneal refractive procedure performed on the VisuMax femtosecond laser to reduce or eliminate myopia in certain patients 22 years of age or older

ACRYSOF IQ RESTOR +3.0D | ALCON

Multifocal toric IOL designed to address presbyopia and preexisting corneal astigmatism at the time of cataract surgery in adult patients

XEN GLAUCOMA TREATMENT SYSTEM

DECEMBER

ALLERGAN

Reduces IOP in patients and is indicated for the management of refractory glaucomas, where previous surgical treatment has failed, or in patients with primary open-angle glaucoma, and pseudoexfoliative or pigmentary glaucoma with open angles that are unresponsive to maximum tolerated medical therapy

PLEX ELITE 9000 SWEPT-SOURCE OCT

CARL ZEISS MEDITEC

The first swept-source OCT imaging technology for posterior ocular structures
